

NEW PRODUCT:

SKETCH FACE FLUSH VENEER INTERIOR DOORS:

There is a new trend in the interior flush door field. Traditionally flush doors were one type of wood species and the veneer ran vertically. Today flush door manufacturers are mixing up door veneers in different directions and even different species of woods. With all the veneer and orientation options there are almost limitless designs.

There seems to be a trend towards more modern clean designs, these doors fit that type of house very well. We do have two different types of these doors on display.
